

CSIS1410

Final Project Proposal

Jaiden Kazemini

The GUI I will be creating is going to be an advanced tip calculator. I know I could make this very simple, but I think to make it more challenging I am going to add things such as different tip percentages, an option for the user to input a percentage of their choice, etc. I will have at least 3 classes which include the main class which runs the actual GUI, and then 2+ other classes that I have yet to decide, one of which will include reading/writing from a CSV file or database.
